Does anyone know of some easy to do mods for the Ft-530?

 Thanks,
 Shane KB7ZFBV

It works... Basically, what is happening is that you put the rig in Tone
Squelch Mode and then as you would normally be "dialing" or using the
MHz UP/DOWN buttons to select a tone frequency, you HOLD DOWN the MHz

UP/DOWN button for a second to literally start "scanning" the tone frequencies. If the signal you are tuned to is in fact "tone encoded" and is one of the EIA standard freqs, the rig will stop on the frequency and the tone squelch will "open" allowing you to hear the conversation.

OK, Thanks Guys. Turns out I just forgot to put it into tone squelch first.

Definitely a nice radio. Deserves a better manual.

Cheers,
Tom
